

## **ANNOUNCEMENT**

### **ADDING A SECOND CURRENCY FOR THE IP2PGLOBAL PLATFORM**

**JUNE 11, 2018-** As per our whitepaper, we stated that ETH will be the 'currency' that will be used for the financing activities in the iP2PGlobal Platform. However since we started our Pre-ICO and ICO, we have undertaken many discussion and received numerous feedbacks from our stakeholders (TWQ investors, potential business partners) on this matter, thus we are now convinced that adding another cryptocurrency for the platform's financing activities will have a positive impact on the popularity of the iP2PGlobal platform hence potentially increasing the demand for the TWQ token.

After much deliberations, the management of iP2PGlobal Ltd., has decided to select and add USD Tether (ERC20-based) as a second currency for the platform.

One of the strongest advantage for including USDT, is the fact that it is a stable cryptocurrency. The value of USDT is pegged to USD since every USDT is backed 1-to-1 with USD deposits.

For TWQ token holders, they will now have a choice whether to borrow in ETH or USDT. If they choose to borrow in USDT, the USDT can be easily converted to USD fiat money and vice versa on a 1-to-1 basis (before fees). In selecting USDT both borrower and also lenders will not be taking any cryptocurrency price fluctuation risks on repayment and income.

In other words, TWQ token holders can now seek for financing in the iP2PGlobal Platform for ANY REAL WORLD usage and needs.

Due to time constraints we will not be amending our existing whitepaper to incorporate USDT as the second platform currency. However we have included another litepaper to our website to explain more on the usage of USDT in our iP2PGlobal platform.

Thank You,

James Loy, CEO, iP2PGlobal Ltd.
